</> OBJECTIVE

Analytical B.Tech  graduate with a strong background in **Full-Stack Web Development (React.js, Firebase, Supabase)** and a deep understanding of **SDLC/Agile frameworks**. Adapt at orchestrating technical delivery by combining traditional engineering with **AI-driven workflows (Vibe Coding)** and **Low-Code automation**. Experienced in **AI API integration** and building with **AI Agents**, with a functional understanding of **RAG architectures** and **MCP-based tool integration**.

⚙ Skills

Methodologies: SDLC (Software Development Life Cycle)

- **Collaboration:** Managing cross-functional communication between design and dev teams.
- **AI Orchestration & Modern Workflow**
 - **AI-Driven Development:** Vibe Coding (Cursor, Claude), Prompt Engineering for rapid prototyping.
 - **AI Agents & Automation:** Integrating AI APIs (OpenAI/Anthropic), building Low-Code automation flows with **n8n**, **zapier** and **makes**.
 - **Emerging Tech:** Functional understanding of RAG (Retrieval-Augmented Generation) and MCP (Model Context Protocol).

Engineering Foundation (Full-Stack/Low-Code)

- **Web Technologies:** React.js, JavaScript (ES6+), HTML5/CSS3.
- **Data & Backend:** Firebase, Supabase (Real-time Database Management), SQL basics.
- **Deployment & Ops:** Version Control (Git/GitHub), Vercel, Netlify.

🎓 Education

B.Tech In Computer Science Engineering,
Indore Institute Of science & Technology
8.01 CGPA

📁 Projects

OracleEye | AI-Driven Social Platform

- **Description:** Developed a prototype social/dating application featuring secure **Google Auth** and real-time database management using **Supabase**.
- **Orchestration:** Leveraged **Antigravity** (Agentic IDE) and **Google Stitch** for rapid UI/UX "vibe design" and functional prototyping.
- **Key Tech:** React.js, Supabase, Vercel, Google Stitch, Antigravity.

Bunny.AI | Cross-Platform Voice Orchestrator

- **Description:** Engineered a desktop automation system that allows remote system control via a mobile device using an **ngrok** secure tunnel.
- **Architecture:** Integrated **Ollama** for local LLM inference and trained a custom voice-mimicry model (OMNX) using **Google Colab**.
- **Impact:** Built a hands-free execution layer where voice commands are transcribed and processed to trigger local desktop actions.

College Level Hackathon | Lead & Runner-up

- **Achievement:** Secured **2nd Prize** by leading a 4-member team to build a high-performance interactive website.
- **Technical Leadership:** Orchestrated the integration of **Three.js** for 3D visuals and **React.js**

Activities & Community

- **Developer Circles:** Active member of **Meta & Facebook Developer Circle**, contributing to discussions on AI integration and full-stack architecture.
